

EDUCATIONAL GAMES AGE 8-10+

How can educational games be beneficial to children with dyspraxia?

Engaging in educational games with kids is one of the best ways to combat their learning obstacles. Additionally, certain games help increase and strengthen their core abilities; for example, standing on a wobble board will improve gross motor skills. Playing a number of these games will help to increase kids' ability to succeed in literacy, numeracy, time, tempo, spatial and awareness. All these vital areas involve fine and gross motor skills. They enhance and reinforce these essential skills, and even playing in a group setting will offer valuable learning opportunities.
